**Mechanical Characteristics**

| Item                         | Test Condition  | Evaluation Standard  |
|------------------------------|---|--|
| Solderability                | Lead terminals are immersed in rosin for 5 seconds and then immersed in solder bath of 270 ±5°C for 3 ±1 seconds.   | 90% surface of lead terminals should be wet with solder. (Except the edge of the terminal)   |
| Soldering Heat Resistance    | Lead terminals are immersed up to 1.5mm from the buzzer's body in a solder bath of 260 ±5°C for 3 ±1 seconds.   | No in interference in operation.   |
| Terminal Mechanical Strength | Apply force of 9.8 N (1.0 kg) to the terminal for 10 seconds in each axial direction.   | No damage or cutting off.  |
| Vibration                    | The buzzer will be measured after applying a vibration amplitude of 1.5mm with 10 to 55 Hz band of vibration frequency to each of the 3 perpendicular directions for 2 hours. | After the test, the part should meet specifications without any damage to the appearance and performance. The SPL should be within ±10 dBA when compared to the initial measurement. |
| Drop Test                    | The part is to be dropped from a height of 75 cm onto a 40 mm thick wooden board 3 times in 3 axis (X, Y, Z) for a total of 9 drops.  |  |

**Environment Test**

| Item                 | Test Condition   | Evaluation Standard  |
|----------------------|--|--|
| High temp. test      | The part will be subjected to +70°C for 96 hours.  | After the test, the part shall meet specifications without any damage to the appearance except SPL. After 4 hours at +25°C, the SPL should be within ±10 dBA of the initial SPL. |
| Low temp. test       | The part will be subjected to -30°C for 96 hours   |  |
| Thermal shock        | The part will be subjected to 10 cycles. One cycle will consist of:<br><br>                   |  |
