

**SERIES:** CFM-60 | **DESCRIPTION:** DC AXIAL FAN

**FEATURES**

- 60 x 60 mm frame
- high fan speed for greater air flow
- dual ball bearing construction
- auto restart protection standard on all models

| MODEL        | input voltage |             | input current |         | input power | rated speed | air flow <sup>1</sup> | static pressure <sup>2</sup> | noise     |

| White <sup>1</sup>  | RD Signal |
| Blue <sup>1</sup>   | PWM       |

Note: 1. Wires only present on versions with output signals.

## APPLICATION NOTES

### Auto Restart Protection/Current Limit Protection

When the fan motor is locked, the device will cut off the drive current within two to six seconds and restart automatically after a few seconds. If the lock situation is continued, the device will work on a repeated cycle of cut-off and restart until the lock is released. (See Figure 1 below).

**Figure 1 Current Limit Protection**

### Lock Sensor/Rotation Detector

Lock Sensor is used to detect if the fan motor is operating or stopped. Alarm High: the output will be logical low when fan is operating and be logical high when fan motor is locked. (See Figures 2~3 below).

**Figure 2 Alarm High Output Waveform**

**Figure 3 RD Signal Output Circuit: Open Collector**

### Pulse Sensor/Tachometer Signal/FG

Pulse Sensor is for detecting the rotational speed of the fan motor. At locked rotor condition, the signal stops cycling and the output is fixed at VoH or VoL (See Figures 4~5 below).

**Figure 4 Output Waveform**

**Figure 5 FG Signal Output Circuit: Open Collector**

### PMW Control Signal

A speed control lead can be provided that will accept a PWM signal from the customer circuit to vary the speed of the fan. The change in speed is linear by changing the Duty-Cycle of the PWM. Open collector type and pull-up voltage is changed by maximum operating voltage and sink current by consuming current. (See Figure 6 below).

**Figure 6 Duty Cycle**

## REVISION HISTORY
