

**PART NUMBER:** CPE-352

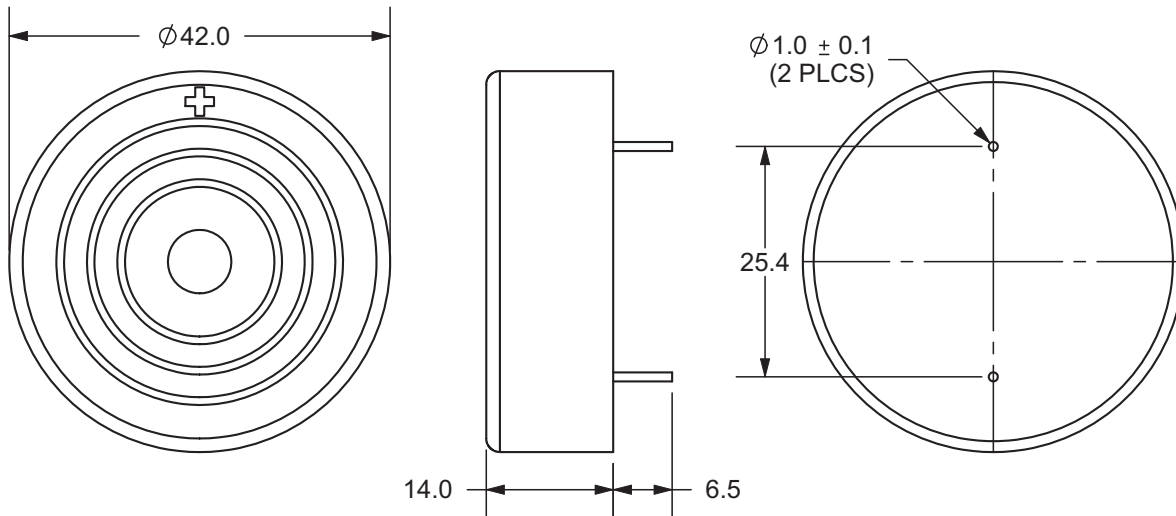

**DESCRIPTION:** piezo audio indicators

**SPECIFICATONS**

|                         |                                   |                  |
|-------------------------|-----------------------------------|------------------|
| operating frequency     | 2.8 ± 0.5 KHz                     |                  |
| operating voltage range | 3 ~ 28 V DC                       |                  |
| current consumption     | 10 mA max.                        | at 12 V DC       |
| sound pressure level    | 89 db min.                        | at 30 cm/12 V DC |
| rated voltage           | 12 V DC                           |                  |
| tone                    | continuous                        |                  |
| operating temperature   | -30 ~ +85° C                      |                  |
| storage temperature     | -40 ~ +95° C                      |                  |
| dimensions              | Ø42.0 x H14.0 mm                  |                  |
| weight                  | 12.0 g max.                       |                  |
| material                | ABS UL-94 1/16" high heat (black) |                  |
| terminal                | pin type (Au plating)             |                  |
| RoHS                    | yes                               |                  |

**MECHANICAL CHARACTERISTICS**

| item                       | test condition                                                                                                                                                                  | evaluation standard                                                                                                                                                      |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| solderability <sup>1</sup> | Lead terminals are immersed in rosin for 5 seconds and then immersed in solder bath of 270 ±5°C for 3 ±1 seconds.                                                               | 90% min. of the lead terminals will be wet with solder (except the edge of the terminal).                                                                                |
| soldering heat resistance  | Lead terminals are immersed up to 1.5mm from buzzer's body in solder bath of 300 ±5°C for 3 ±0.5 seconds or 260 ±5°C for 10 ±1 seconds.                                         | No interference in operation.                                                                                                                                            |
| terminal strength pulling  | For 10 seconds, the force of 300g is applied to each terminal in axial direction.                                                                                               | No damage or cutting off.                                                                                                                                                |
| vibration                  | The buzzer shall be measured after applying a vibration amplitude of 1.5 mm with 10 to 55 Hz band of vibration frequency to each of the 3 perpendicular directions for 2 hours. | The value of oscillation frequency/current consumption should be ±10% of the initial measurements. The SPL should be within ±10dB compared with the initial measurement. |
| drop test                  | The part will be dropped from a height of 75 cm onto a 40 mm thick wooden board 3 times in 3 axes (X, Y, Z) for a total of 9 drops.                                             |                                                                                                                                                                          |

Notes: 1. Not recommended for wave soldering

**ENVIRONMENT TEST**

| item             | test condition                                                                                                                                                  | evaluation standard                                                                                                                                                                                                                                       |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| high temp. test  | After being placed in a chamber at +95°C for 240 hours.                                                                                                         | The buzzer will be measured after being placed at +25°C for 4 hours. The value of the oscillation frequency/current consumption should be ±10% compared to the initial measurements. The SPL should be within ±10dB compared to the initial measurements. |
| low temp. test   | After being placed in a chamber at -40°C for 240 hours.                                                                                                         |                                                                                                                                                                                                                                                           |
| humidity test    | After being placed in a chamber at +40°C and 90±5% relative humidity for 240 hours.                                                                             |                                                                                                                                                                                                                                                           |
| temp. cycle test | The part shall be subjected to 5 cycles. One cycle will consist of:<br><br> |                                                                                                                                                                                                                                                           |
